

 ALPHA DATA		Counterfeit Parts Policy Statement	
Date: 31/01/2023	Page 1 of 1	Doc. No AD-BF-103	Rev. No 1.0

As part of Alpha Data Parallel Systems commitment to designing and producing high end, reliable products, we understand seriousness of a robust and secure supply chain. With the global increase of counterfeited components on the market we have implemented the following strategies to ensure that all our components are purchased in the most secure ways possible.

1. In conjunction with ISO9001:2015 our supply chain is highly vetted and monitored continuously.
2. Parts will be purchased directly from the manufacturer through our partnership systems or through franchised sources.
3. Production parts are only purchased from our approved supplier lists.
4. Obsolete or difficult to source parts will be subject to customer approval through approved brokers or independent distributors. *Additional quality checks available for product purchased this way.
5. Controlled process for goods inward inspection -relating to packaging, labelling, unusual print, missing stamps/labels, marking and logo legibility, CoC and inspection reports.
6. Educate employees, partners, and customers about the dangers of counterfeit products. This may include providing training on how to identify counterfeit products, as well as communicating the potential risks associated with using counterfeit products.
7. Work with industry organizations and trade groups to stay informed about the latest trends and developments in counterfeiting. This may include participating in information-sharing networks, attending industry events and conferences, and collaborating with other companies to develop best practices for combating counterfeiting.
8. Working with relevant industry support sources to identify and report suspect components. Including working with legal and regulatory bodies to report and prosecute counterfeiting operations.
9. Maintain a proactive stance on counterfeiting by continually reviewing and updating our policies and procedures as needed. This will ensure that our business remains vigilant in the face of evolving threats and that we are able to respond quickly and effectively to any incidents of counterfeiting that may arise.

By implementing a comprehensive counterfeiting policy, Alpha Data Parallel Systems can protect its reputation and financial stability, while also safeguarding the safety and well-being of its customers.
