Prime Application

**IF/Baseband Signal Sampling**

Board Features

- Dual 14-bit 125Msps ADCs
- External Clock Input

Summary

The **XRM2-ADC-D2/125** is an XRM2 I/O Module, providing two Analog to Digital converters with 14-bit resolution and sampling rates up to 125Msps.

Aimed at IF/Baseband Signal Sampling, the sampling clock can be sourced from either an external clock source or from a clock generated within the attached FPGA board. A Trigger I/O port is provided for use as a trigger control and an Auxiliary I/O port for general purpose signaling. A number of customisation options are offered with this card, ranging from signal input connector style through to transformer or DC-Coupling of inputs.
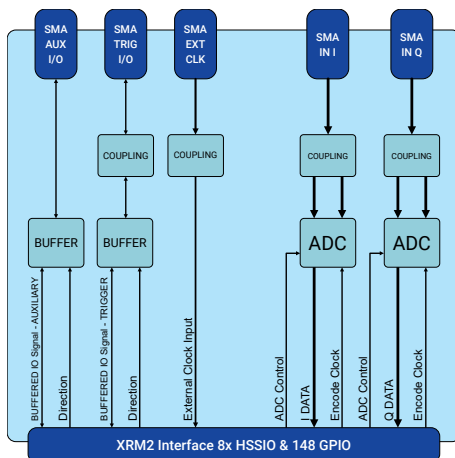

Deliverables

XRM2-ADC-D2/125 Board
One Year Warranty
One Year Technical Support

Board Format

Alpha Data XRM2 I/O Module

Input/Output Interfaces
